

The lexical linguistic indication of deriving the verb from the digit seven In light of semantic theory field

Abstract

The research demonstrates the importance of the science of etymology, which is the pride of Arabic, and that it is one of the most important features of the Arabic language to develop the language and increase verbal wealth, and clarifies the meanings of derived words. The research also presents a new vision about deriving the verb from the number in general, and from the number seven in particular, showing the features that characterized this number, I mean the number seven over the rest of the numbers. The researcher tries to shed light on the semantics of the verbs derived from the number seven, and explains how the Arabs used them in their linguistic contexts and the significance of each context.

The researcher was able to benefit from the theory of semantic fields and employ it in the research to bring it closer to the readers and researchers on the one hand, and to clarify the meanings of the verbs derived from the number seven on the other hand.

Key words: Derivatives, Syntax sphere, number seven, verb.
